

Industrial and Commercial ESS_On-Grid

100kW/225kWh

Features

System productization, integrating energy storage battery, PCS and power distribution, temperature control and fire protection, flooding door magnet, and monitoring and communication, comprehensively controlling system operation status and risk.

Patented outdoor cabinet protection design, optimized cooling air ducts, protection from dust and rain; front and rear doors open for maintenance, which facilitates side-by-side arrangement of multiple systems on site and reduces floor space.

Door-mounted embedded integrated air-conditioning, does not take up cabinet space, improve the available space of outdoor cabinets, better structural integrity of the top, good waterproof effect.

The local control panel can realize diversified functions such as system operation monitoring, energy management strategy formulation, and equipment remote upgrade.

Grid-connected application equipment (BHF-X225) supports 10 parallel units with a maximum capacity of 2.25MWh.

For the existing PV configuration users, you can directly increase the BHF-X225 equipment, in the AC test and use.
